Software Engineer ♦ anandannu10@gmail.com — +91 9102975237 — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

SUMMARY

Software Engineer with ~3 years of experience in Agentic AI, LLM-based systems, and full-stack development. Experienced in building scalable AI workflows using LangGraph, RAG, multi-agent architectures, and tool orchestration. Strong background in automating enterprise processes and delivering end-to-end production systems with measurable impact.

EDUCATION

Bachelor of Technology - Indian Institute Of Technology Tirupati (CGPA: 8.17) 2019 - 2023

SKILLS

Languages & Backend: Python, JavaScript, Node.js, SQL, .NET (REST APIs, Microservices)
Frontend: Angular, HTML, CSS
AI/LLM Systems: Agentic AI, RAG, Prompt Engineering, MCP, Vector Databases, LangGraph

EXPERIENCE

Full Time - Software Engineer Aug 2023 - present
GEP Worldwide *Hyderabad, India*

- Built Agentic AI solutions for supplier workflows using LangGraph, replacing manual onboarding with scalable chatbot-driven flows.
- Automated supplier onboarding workflows with data auto-fill, document extraction, validation, multilingual support, and risk screening (sanctions/adverse checks), reducing manual effort by ~70%.
- Designed multi-agent AI systems with tool orchestration for scalable and secure workflows.
- Leveraged RAG pipelines with MCP and vector databases to enable context-aware retrieval, natural language querying, and supplier insights.
- Developed full-stack solutions using Angular, Python, .NET, and Node.js, including API and database integration.
- Led Supplier AI releases, owning validation, sanity checks, and delivery timelines while coordinating across teams and improving adoption via documentation.

Intern - Software Engineer May 2022 - Jul 2022
GEP Worldwide *Remote Work*

- Conducted R&D on translation/transliteration APIs and built optimized pipelines using Python (multiprocessing) and Azure Cognitive Services.
- Automated workflows using Azure Functions and Logic Apps, reducing manual effort by ~90%.

PROJECTS

AI Portfolio – Agentic AI Platform

- Built an Agentic AI platform using RAG, Multi-Agent Systems, MCP, and Tool Orchestration.
- Implemented memory-aware interactions, handling negative inputs and tool failures for robust AI behavior.
- Developed full-stack application using Angular, Python, and Node.js with vector-based retrieval and scalable APIs.

ACHIEVEMENTS & CERTIFICATIONS

- Completed Agentic AI Course (LinkedIn) [2024]
- Earned Elite + Silver in NLP Course (NPTEL) [2021]
- Regional Mathematical Olympiad Qualifier [2017]
- Student of the Year (10th Class) [2017]
